

# How To Make a Diaper Cake

## Materials

- 2 packs of size 2 diapers
- Hot Glue Gun
- A large pack of hot glue sticks
- Ribbons (different colors and designs)
- Cake base
- Paper Towel cardboard roll
- Any other decorations you would like to add
  - I added baby shoes, wooden boat decoration, small battery powered tea light, and tea light holder for the top.

## Instructions

- Take the disposable cake base (or one that you are not fond of) and start making the base of your diaper cake.
- Roll each diaper and hot glue the edge to keep it closed. (you could also wrap it with twine or string but mine didn't work out that well)
- Glue each diaper to the base. Begin at the center and spiral out to the edge.
- Start the second layer the same way but don't go all the way to the edge of the base layer. Leave a few inches for placing decorations.
- Once that is complete take the paper towel cardboard roll and glue to the middle of second layer. Then glue rolled diapers around the tube. This will be two layers high.
- Once done glue ribbons round the cake and add decorations wherever you choose. Like in my photos I glued the tea light holder on the top.
